

Practical No 2: Jenkins Pipeline for File and Folder Operations with Multi-Stage Execution

Step 1: Open Jenkins Dashboard

Open your browser and go to <http://localhost:8080> and login to Jenkins.

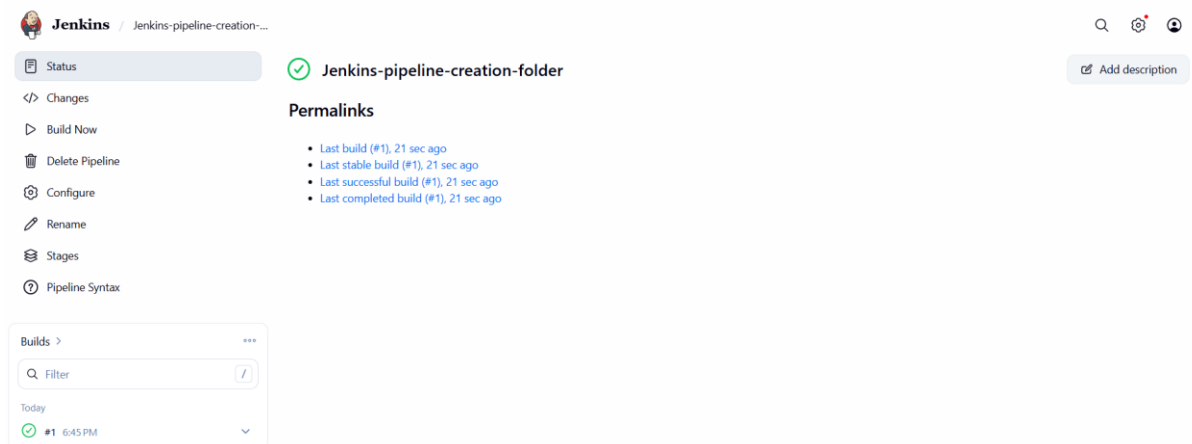

Step 2: Create a New Pipeline Job

1. Click on 'New Item'
2. Enter job name: Jenkin-pipeline-creation-folder
3. Select 'Pipeline'
4. Click OK

Step 3: Configure Pipeline Script

Scroll to Pipeline section and select 'Pipeline script', then add the following code:

Step 4: Save and Run Pipeline

Click on 'Save' and then click on 'Build Now' to run the pipeline.

The screenshot displays the Jenkins web interface for a pipeline named 'Jenkins-pipeline-creation-...'. The top navigation bar includes the Jenkins logo, the pipeline name, and a dropdown menu showing '#1'. On the right, there are search, settings, and user profile icons. The left sidebar contains a list of navigation options: Status (highlighted), Changes, Console Output, Delete build '#1', Timings, Pipeline Overview, Edit build information, Restart from Stage, Replay, Pipeline Steps, and Workspaces. The main content area shows the status of build '#1' as successful, with a green checkmark and the timestamp 'May 3, 2026, 6:45:22 PM'. Below this, it indicates the build was started by user 'Kavya Gupta'. A section titled 'This run spent:' lists the following metrics: 27 ms waiting, 4.6 sec build duration, and 4.6 sec total from scheduled to completion. A 'No changes' message is also visible. On the right side of the main content area, there are buttons for 'Add description' and 'Keep this build forever', along with a status indicator showing 'Started 34 sec ago' and 'Took 4.6 sec'.

Step 5: Observe Output

Click on the build number and open 'Console Output' to see execution logs.

Expected Output

All stages (Build, Test, Deploy) should execute successfully with messages displayed.

Conclusion

Successfully created and executed a simple Jenkins pipeline.
