

# Simple Jenkins Pipeline Practical-01

To create and run a simple Jenkins pipeline without using Git or Docker.

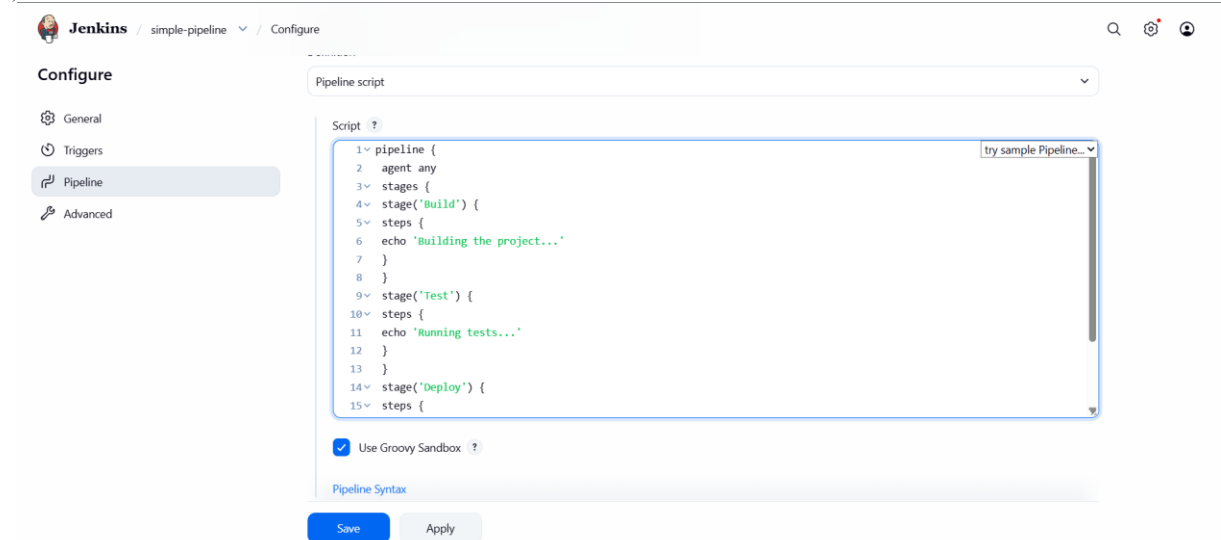

## Step 1: Open Jenkins Dashboard

Open your browser and go to <http://localhost:8080> and login to Jenkins.

## Step 2: Create a New Pipeline Job

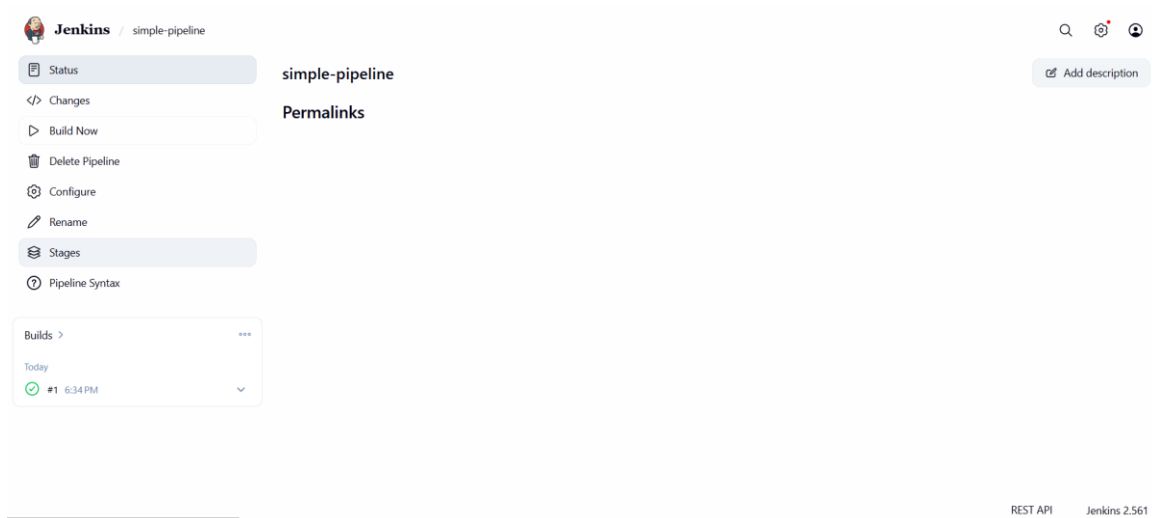

1. Click on 'New Item'
2. Enter job name: simple-pipeline
3. Select 'Pipeline'
4. Click OK

```
pipeline {
  agent any
  stages {
    stage('Build') {
      steps {
        echo 'Building the project...'
      }
    }
    stage('Test') {
      steps {
        echo 'Running tests...'
      }
    }
    stage('Deploy') {
      steps {
        echo 'Deploying the application...'
      }
    }
  }
}
```

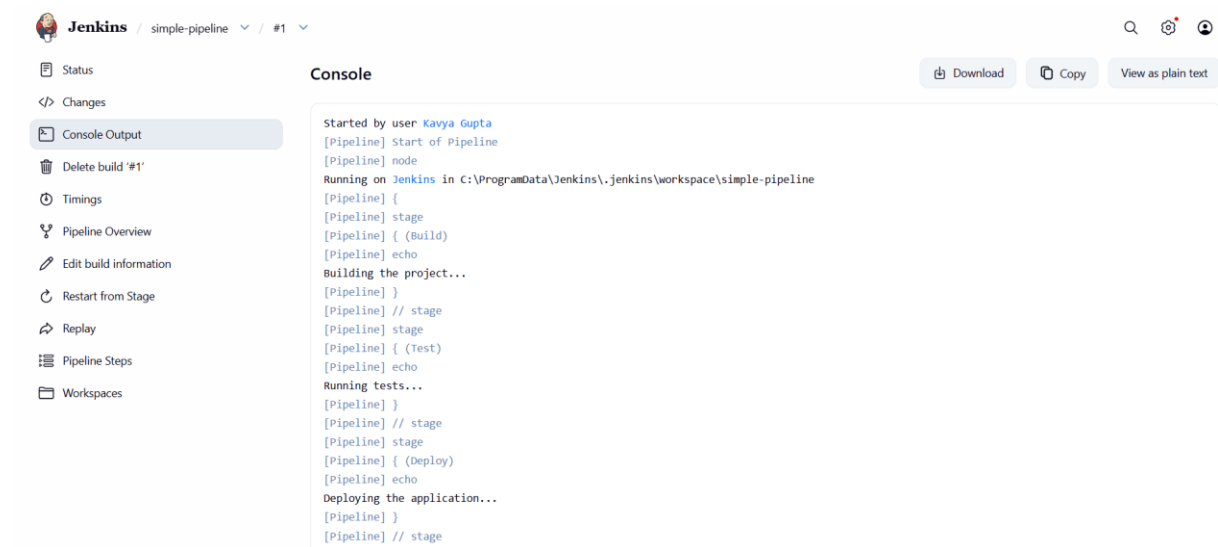

## Step 3: Configure Pipeline Script

Scroll to Pipeline section and select 'Pipeline script', then add the following code:

## Step 4: Save and Run Pipeline

Click on 'Save' and then click on 'Build Now' to run the pipeline.

## Step 5: Observe Output

Click on the build number and open 'Console Output' to see execution logs.

### Expected Output

All stages (Build, Test, Deploy) should execute successfully with messages displayed.

### Conclusion

Successfully created and executed a simple Jenkins pipeline.
